## Surface Preparation Notes

All surfaces should be free of oil, grease, dirt, corrosives, oxides, paints or other foreign matter. No further preparation is required when coating ceramics, refractories or graphites. Quartz should be sandblasted whenever possible. Smooth metal surfaces should be sandblasted or etched using Aremco's Corr-Prep<sup>®</sup> CPR2000.

<sup>&</sup>lt;sup>1</sup> Viscosity is measured using a Brookfield LV Viscometer; spindle and speed selection vary depending on the product.

<sup>&</sup>lt;sup>2</sup> Estimated Wet Film Thickness (WFT).

<sup>&</sup>lt;sup>3</sup> Recommended Dry Film Thickness (DFT).

<sup>&</sup>lt;sup>4</sup> Actual coverage will vary depending on material losses during mixing and application.

<sup>&</sup>lt;sup>5</sup> Where a value is provided for "Min Air Set", it is recommended that the coating set at room temperature for, at minimum, the specified time prior to curing.

<sup>&</sup>lt;sup>6</sup> Recommended ramp rate is 10 °F per minute.
